

WATER MANAGEMENT POLICY

Our water supply system is connected to the municipal network.

To prevent water wastage, we conduct periodic checks and utilize drip irrigation methods. For drinking water, we have replaced bottled water with a filtration system. Each floor is equipped with pressure-reducing valves to maintain appropriate water pressure.

We have installed flow-reducing aerators on faucets and showerheads. Towels and bed linens are changed upon guest request, and we leave environmental cards in the rooms to encourage this practice.

Our staff receives training and information on water conservation. Our toilets are equipped with dual-flush systems, with capacities reduced by 50%. Sensor-operated faucets are used in public restrooms.

We regularly conduct physical, chemical, and microbiological analyses to monitor water quality in our facility.
